

Energy economy

**Rail logistics
solutions
throughout
Europe**

Sustainable rail-based solutions for the energy industry

- We work with you to develop reliable and binding rail logistics concepts that meet your needs.
- We are attuned to the changing traffic streams and volumes of our customers and can flexibly adapt our transport concepts to changing customer requirements.

What we offer you

Security of supply

With an extensive fleet of locomotives and wagons that meet the various customer requirements and enable individual, Europe-wide transports for the energy industry.

Accompanying the transformation

Together we design sustainable concepts for new traffic streams such as hydrogen and carbon dioxide (CO₂)

Coordination of traffic streams

From different sources (ARA ports, North Sea ports etc.) and cross-modal logistics concepts

Comprehensive customer support

Around the clock, 365 days a year and international transport monitoring and shipment tracking – including our expertise in the transportation of hazardous goods.
