Cement – Transports for the building material of the future

Reliable and just in time for cement transshipment.

Task

- Sustainable transport operations aimed at reducing CO₂
- High reliability for a smooth production process and flexibility in the face of fluctuating volumes
- Special equipment for direct transshipment to HGV

Solution

- Use of factory shunting services enables global coordination and more efficient intermeshing of logistics processes
- On-time delivery and dispatching
- Coordination of logistics on receipt (including the berth of a ship)

Customer benefits

- Customers' CO₂ reduction goals are achieved
- Just-in-time delivery ensured, e.g. crucial in the case of seaport transshipment due to high demurrage charges
